Where Does the Website Address Go?

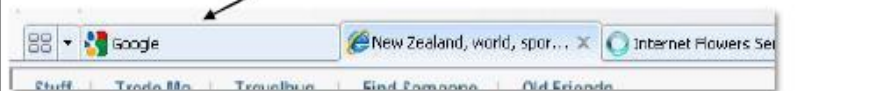

Generally you type (or copy) the website address into the address box, then click the Google/search button *OR* just hit enter (on your keyboard).

To Open Multiple Tabs

To open multiple tabs click on the first tab a few times, this will open more tabs...

Tabs and Windows

Newer web browsers offer tabbed browsing—the ability to view multiple pages within one window. Tabs make it easy to have several web pages open at once without cluttering your desktop with different windows—just click on a tab to view its page.

To create a new tab, go to File > New Tab, OR **RIGHT** click on a hyperlink, then select **open in new tab** or **open in new window** option. Or press *Ctrl-T* on the PC, or *Command-T* on a Mac
